

<b>Test name</b>	<b>HYPERTROPHIC CARDIOMYOPATHY (HCM) - MAINE COON (A31P)</b>
Swab Number	55866
Animal Number	15992

<b>Owner/Breeder</b>	
Name	Karen Buscavage
Address	653 Sportsman Road Denver UNITED STATES PA, 17517.

<b>Animal Details</b>	
Name	MaineVu Drogo Of DCFD
Sex	Male
Breed	Maine Coon
Registration No. ID	SBT 062813 015
Microchip No.	

Specimen Type	BUCCAL CELLS
Date Received	2/05/2014 6:51:52 AM

<b>Test Result</b>	<b>Clear</b>
Interpretation	<p>The specific HCM mutation is not present. This test identifies the most common mutation currently known to cause HCM in Maine Coon cats. It identifies a mutation in the MYBPC3 gene as described by Meurs et al.</p> <p>If the mutation is not present, it does not mean that the cat will never develop HCM, as other causes are possible. A "Clear" result means that the cat's DNA does not contain this specific mutation.</p> <p>In breeds other than Maine Coon, a positive result indicates that the cat has the specific mutation.</p> <p>Reference: Meurs et al. Human Molecular Genetics 2005, 14, 3587</p>

Date of report: 14 June 2014

Authorised by:

*NB: There may be rare instances where the animals colour or pattern in DNA sequence that has not previously been reported.*
